### Section 1.7: MULTIPLICATION AND DIVISION OF REAL NUMBERS

When you are done with your homework you should be able to...

- $\pi$  Multiply real numbers
- $\pi$  Multiply more than two real numbers
- $\pi$  Find multiplicative inverses
- $\pi$  Use the definition of division
- $\pi$  Divide real numbers
- $\pi$  Simplify algebraic expressions involving multiplication
- $\pi$  Determine whether a number is a solution of an equation
- $\pi$  Use mathematical models involving multiplication and division

#### WARM-UP:

Find the value of each expression:

1. 
$$\frac{9}{10} - \left(\frac{1}{4} - \frac{7}{10}\right)$$

2. 
$$-|-8-(-2)|-(-6)$$

Write each English phrase as an algebraic expression. Let x represent the number:

1. The difference between 9 times a number and -4 times a number

2. The quotient of -7 and a number subtracted from the quotient of -12 and a number

## THE PRODUCT OF TWO REAL NUMBERS

 $\pi$  The \_\_\_\_\_ of two real numbers with \_\_\_\_\_ signs is

found by \_\_\_\_\_ their \_\_\_\_ values. The

product is \_\_\_\_\_\_.

 $\pi$  The \_\_\_\_\_ of two real numbers with the \_\_\_\_\_ sign is

found by \_\_\_\_\_ their \_\_\_\_ values. The

product is \_\_\_\_\_\_.

 $\pi$  The \_\_\_\_\_ of zero and any real number is \_\_\_\_\_.

Example 1: Multiply.

$$1. -15(5)$$

$$(-11)(-12)$$

4. 
$$\frac{4}{3} \cdot 0$$

## MULTIPLYING MORE THAN TWO NUMBERS

1. Assuming that no factor is zero,

 $\pi$  The \_\_\_\_\_ of an \_\_\_\_ number of \_\_\_\_

numbers is \_\_\_\_\_\_.

 $\pi$  The \_\_\_\_\_ of an \_\_\_\_ number of \_\_\_\_

numbers is \_\_\_\_\_\_.

2. If any \_\_\_\_\_ is \_\_\_\_, the product is \_\_\_\_.

Example 2: Multiply.

1. 
$$-7(5)(-6) \cdot 2$$

2. 
$$(13)(-1)\left(-\frac{5}{2}\right)(-8)$$

## THE MEANING OF DIVISION

The result of \_\_\_\_\_\_ the real number \_\_\_\_ by the nonzero real number \_\_\_\_ is called the \_\_\_\_\_ of \_\_\_\_ and \_\_\_\_. We can write this \_\_\_\_\_ as \_\_\_\_ or \_\_\_\_. We can define division in terms of \_\_\_\_\_ by using \_\_\_\_\_ inverse or

Example 3: Find the multiplicative inverse of each number.

- 1. 12
- 2.  $-\frac{1}{4}$
- 3.  $-\frac{7}{8}$

#### DEFINITION OF DIVISION

If a and b are real numbers and b is not equal to zero, then the \_\_\_\_\_\_
of \_\_\_\_ and \_\_\_\_ is defined as

The \_\_\_\_\_ of two real numbers is the \_\_\_\_ of the \_\_\_\_ of the \_\_\_\_ of the \_\_\_\_ of the \_\_\_\_ number and the \_\_\_\_ of the \_\_\_\_ number.

Example 4: Divide using the definition of division.

1. 
$$5 \div \frac{1}{5}$$

2. 
$$\frac{-123}{-3}$$

# THE QUOTIENT OF TWO REAL NUMBERS

 $\pi$  The \_\_\_\_\_ of two real numbers with \_\_\_\_\_ signs is

found by \_\_\_\_\_ values. The

quotient is \_\_\_\_\_\_.

 $\pi$  The \_\_\_\_\_ of two real numbers with the \_\_\_\_\_ sign is

found by \_\_\_\_\_ values. The

quotient is \_\_\_\_\_\_.

 $\pi$  Division of any real number by \_\_\_\_\_ is \_\_\_\_\_.

 $\pi$  Any nonzero number divided into \_\_\_\_\_ is \_\_\_\_\_.

Example 5: Divide.

3. 
$$-\frac{2}{5} \div \frac{1}{10}$$

5. 
$$\frac{123}{-3}$$

4. 
$$\frac{0}{123}$$

6. 
$$-1.8 \div (-0.6)$$

# ADDITIONAL PROPERTIES OF MULTIPLICATION

PROPERTY	MEANING	EXAMPLES
IDENTITY PROPERTY OF MULTIPLICATION		
INVERSE PROPERTY OF MULTIPLICATION		
MULTIPLICATION PROPERTY OF -1		
DOUBLE NEGATIVE PROPERTY		

## NEGATIVE SIGNS AND PARENTHESIS

If a \_\_\_\_\_\_ sign precedes parentheses, \_\_\_\_\_ the parentheses and \_\_\_\_\_ the \_\_\_\_ of \_\_\_\_\_ within the parentheses.

Example 6: Simplify.

1. 
$$-4(-3x+2)$$

2. 
$$5(3y-1)-(14y-2)$$

# **APPLICATIONS**

Use the formula  $C = \frac{5}{9}(F - 32)$  to express each Fahrenheit temperature, F, as its equivalent Celsius temperature, C.

1. 
$$-13^{\circ}$$
 F
