## Section 2.6: PROBLEM SOLVING IN GEOMETRY

When you are done with your homework you should be able to...
$\pi$ Solve problems using formulas for perimeter and area
$\pi$ Solve problems using formulas for a circle's area and circumference
$\pi$ Solve problems using formulas for volume
$\pi$ Solve problems involving the angles of a triangle
$\pi$ Solve problems involving complementary and supplementary angles
WARM-UP:
Solve:
After a $30 \%$ reduction, you purchase a DVD player for $\$ 98$. What was the selling price before the reduction?

## COMMON FORMULAS FOR PERIMETER AND AREA

Example 1: Solve.

1. A triangle has a base of 6 feet and an area of 30 square feet. Find the triangle's height.
2. A rectangle has a width of 46 cm and a perimeter of 208 cm . What is the rectangle's length?
3. Find the area of the trapezoid.

## GEOMETRIC FORMULAS FOR CIRCUMFERENCE AND AREA OF A CIRCLE

A $\qquad$ is the set of all $\qquad$ in the $\qquad$
equally distant from a given point, its $\qquad$ . A $\qquad$
(plural $\qquad$ ), $\qquad$ is a line $\qquad$ from the
$\qquad$ to any point on the $\qquad$ . For a given circle,
$\qquad$ radii have the same $\qquad$ A $\qquad$ ,
$\qquad$ is a $\qquad$ segment through the $\qquad$ whose endpoints both lie on the $\qquad$ . For a given circle, all $\qquad$ have
the $\qquad$ length. In any circle, the length of a $\qquad$ is
$\qquad$ the length of $a$ $\qquad$ and the length of a
$\qquad$ is $\qquad$ the length of a $\qquad$ .

Example 2: Solve.

1. Find the area and circumference of a circle which has a diameter of 40 feet.
2. Which one of the following is a better buy: a large pizza with a 16 -inch diameter for $\$ 12$ or two small pizzas, each with a 10-inch diameter, for $\$ 12$ ?

## GEOMETRIC FORMULAS FOR VOLUME

$\qquad$ refers to the amount of $\qquad$ occupied by a
$\qquad$ - $\qquad$ figure. To measure this space, we use
$\qquad$ units.

Example 3: Solve.

1. Solve the formula for the volume of a cone for $h$.
2. A cylinder with radius 2 inches and height 3 inches has its radius quadrupled. How many times greater is the volume of the larger cylinder than the smaller cylinder?
3. Find the volume of a shoebox with dimensions 6 in $\times 12 \mathrm{in} \times 5 \mathrm{in}$.

## THE ANGLES OF TRIANGLES

An $\qquad$ symbolized by $\qquad$ is made up of two $\qquad$ that have a common $\qquad$ . The common endpoint is called the
$\qquad$ . The two rays that form the angle are called its $\qquad$ .

One way to $\qquad$ angles is in $\qquad$ , symbolized by a
small, raised $\qquad$ . There are $\qquad$ in a circle. $\qquad$
is $\qquad$ of a complete rotation.

## THE ANGLES OF A TRIANGLE

The ___ of the ___ of the three angles of ___
triangle is ___

## COMPLEMENTARY AND SUPPLEMENTARY ANGLES

Two angles with measures having a $\qquad$ of $\qquad$ are called
$\qquad$ angles. Two angles with measures having a $\qquad$ of are called $\qquad$ .

Example 4: Solve.

1. One angle of a triangle is three times as large as another. The measure of the third angle is $40^{\circ}$ more than that of the smallest angle. Find the measure of each angle.
2. Find the measure of the complement of each angle.
a. $56^{\circ}$
b. $89.5^{\circ}$
3. Find the measure of the supplement of each angle.
a. $177^{\circ}$
b. $0.2^{\circ}$
4. Find the measure of the angle described.

The measure of the angle's supplement is $52^{\circ}$ more than twice that of its complement.

## Example 5: Find the area of the shaded region.

4 m
