Section 3.2: GRAPHING LINEAR EQUATIONS USING INTERCEPTS
When you are done with your homework you should be able to...
$\pi$ Use a graph to identify intercepts
$\pi$ Graph a linear equation in two variables using intercepts
$\pi$ Graph horizontal or vertical lines

## WARM-UP:

Graph the following equations by plotting points.
a. $y=-x$

| $x$ | $y=-x$ | $(x, y)$ |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

b. $y=\frac{2}{3} x-7$

| $x$ | $y=\frac{2}{3} x-7$ | $(x, y)$ |
| :---: | :---: | :---: |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## INTERCEPTS

An $\qquad$ of a graph is the $\qquad$ of a point where
the graph $\qquad$ the $\qquad$ . The $\qquad$ corresponding to an $\qquad$ is always $\qquad$ !!!

A $\qquad$ of a graph is the $\qquad$ of a point where
the graph $\qquad$ the $\qquad$ . The $\qquad$
corresponding to a $\qquad$ is always $\qquad$ !!!

Example 1: Use the graph to identify the
a. $x$-intercept $\dagger$
b. $y$-intercept $\dagger$

## GRAPHING USING INTERCEPTS

An equation of the form $\qquad$ where $\qquad$
$\qquad$ and $\qquad$ are integers, is called the $\qquad$ form of a line.

STEPS FOR USING INTERCEPTS TO GRAPH $A x+B y=C$

1. Find the $\qquad$ Let $\qquad$ and solve for $\qquad$
2. Find the $\qquad$ Let $\qquad$ and solve for $\qquad$
3. Find a checkpoint, a $\qquad$ ordered-pair $\qquad$ .
4. Graph the equation by drawing a $\qquad$ through the $\qquad$
Example 2: Graph using intercepts and a checkpoint.
a. $x+y=6$

b. $3 x-2 y=-7$

| $x$ | $3 x-2 y=-7$ | $(x, y)$ |
| :---: | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |

## EQUATIONS OF HORIZONTAL AND VERTICAL LINES

We know that the graph of any equation of the form $\qquad$ is a
$\qquad$ as long as $\qquad$ and $\qquad$ are not both $\qquad$ What happens
if $\qquad$ or $\qquad$ but not both, is zero?

## HORIZONTAL AND VERTICAL LINES

The graph of $\qquad$ is a $\qquad$ line. The $\qquad$ is $\qquad$ .

The graph of $\qquad$ is a $\qquad$ line. The is $\qquad$ .

Example 3: Graph.
a. $y=8$
b. $12 x=-60$

Example 4: Write an equation for each graph.

## APPLICATION

A new car worth $\$ 24,000$ is depreciating in value by $\$ 3000$ per year. The mathematical model $y=-3000 x+24000$ describes the car's value, $y$, in dollars, after $x$ years.
a. Find the $x$-intercept. Describe what this means in terms of the car's value.
b. Find the $y$-intercept. Describe what this means in terms of the car's value.
c. Use the intercepts to graph the linear equation.

d. Use your graph to estimate the car's value after five years.
